UNAUDITED ACCOUNTING POLICIES

BASIS OF ACCOUNTING

The financial statements have been prepared under the historical cost convention, and in accordance with the Financial Reporting Standard for Smaller Entities (effective April 2008)

TURNOVER

Turnover is recognised at the fair value of the consideration received or receivable for sale of goods and services in the ordinary nature of the business. Turnover is shown net of Value Added Tax, of goods and services provided to customers and, in the case of long term contracts, credit is taken appropriate to the stage of completion when the outcome of the contract can be ascertained with reasonable certainty.

AMORTISATION

Amortisation is calculated so as to write off the cost of an intangible fixed asset, less its estimated residual value, over the useful economic life of that asset as follows:

Goodwill - Straight line 20 years

FIXED ASSETS

All fixed assets are initially recorded at net book value.

DEPRECIATION

Depreciation is calculated so as to write off the cost of a tangible fixed asset, less its estimated residual value, over the useful economic life of that asset as follows:

Plant & Machinery - 15% reducing balance basis
Motor Vehicles - 25% reducing balance basis

STOCKS

Stocks are valued at the lower of cost and net realisable value, after making due allowance for obsolete and slow moving items.

WORK IN PROGRESS

Work in progress is valued on the basis of direct costs plus attributable overheads based on normal level of activity. Provision is made for any foreseeable losses where appropriate. No element of profit is included in the valuation of work in progress.

DEFERRED TAXATION

Deferred tax is recognised in respect of all timing differences that have originated but not reversed at the balance sheet date where transactions or events that result in an obligation to pay more tax in the future or a right to pay less tax in the future have occurred at the balance sheet date. Timing differences are differences between the company's taxable profits and its results as stated in the financial statements that arise from the inclusion of gains and losses in tax assessments in periods different from those in which they are recognised in the financial statements.

Deferred tax is measured at the average tax rates that are expected to apply in the periods in which timing differences are expected to reverse, based on tax rates and laws that have been enacted or substantively enacted by the balance sheet date. Deferred tax is measured on a non-discounted basis.
