Notes to the Abbreviated Accounts

For the year ending 30 June 2010

1 Accounting policies

Basis of preparing the financial statements

There is a deficit of net assets at the balance sheet, although there are net current assets as a result of the long terms funding that the company has enjoyed in the form of an unsecured loan from the father of the major shareholder. The continuing operation of the company depends for its working capital and further stock purchases on that funding not being withdrawn and additional funding of a similar nature being made available. The lender has confirmed that he will not withdraw his funding to the detriment of other unsecured creditors and that he will provide additional funding for ongoing working capital and stock purchases for a period of at least 12 months from the date of approval of these financial statements. On this basis the director considers that it is appropriate to prepare the financial statements on the basis that the company is a going concern.

Accounting convention

The financial statements have been prepared under the historical cost convention and in accordance with the Financial Reporting Standard for Smaller Entities (effective April 2008).

Turnover

Turnover represents net invoiced sales of goods, excluding value added tax.

Stocks

Stocks and work in progress are valued at the lower of cost and net realisable value, after making due allowance for obsolete and slow moving items. Cost includes all direct expenditure and an appropriate proportion of fixed and variable overheads.

Depreciation

Depreciation has been provided at the following rates in order to write off the assets over their estimated useful lives.

Motor vehicles 20% on reducing balance
