Figure 1 shows the results of the regression analysis. The dependent variable is the number of days of absence from work due to illness. The independent variables are the age, sex, and education of the respondent, and the number of children in the household. The results show that the number of days of absence from work due to illness increases with age, and is higher for females than for males. The number of days of absence from work due to illness also increases with the number of children in the household. The results also show that the number of days of absence from work due to illness is higher for respondents with a high school education than for respondents with a college education.
